 Phone: 330-533-5538
 Fax: 330-533-2424

Soil testing is an excellent measure of soil fertility. It is a very inexpensive way of maintaining good plant health. The standard soil test provides the status of phosphorus (P), potassium (K), calcium (Ca), magnesium (Mg), pH, cation exchange capacity, lime requirement index, and base saturation. With a representative soil sample and an accurate test, sound fertilizer recommendations can help gardeners and growers improve plant quality and productivity, and save money, too. Cost: \$20.00/sample plus tax.
